

Grove

App Manual

Tasks, friends, study rooms, streaks, and steady progress

Welcome to your study grove!

Grove brings your tasks, friends, rooms, profile, and streak tree into one calm place. This manual gives you the quick version first, then walks through every major page.

Best part: this PDF has clickable sections and works with continuous scrolling in your browser's PDF viewer.

Contents

1	 Getting Started	3

9.3	Settings returns to Home	8
9.4	Invalid Refresh Token	8
9.5	Tasks, rooms, friends, or streaks fail to load	9
10	 Quick Final Checklist	9

How to use this PDF

Click any section in the table of contents, use the PDF sidebar bookmarks, or simply scroll from top to bottom. Use your browser’s search command (usually **Ctrl+F** or **Cmd+F**) to jump to words such as “tasks,” “friends,” or “refresh token.”

Getting Started

Your 60-second setup

- 1. **1** Create an account with your first name, last name, email, and password.
- 2. **2** Confirm your email if Grove asks you to do so.
- 3. **3** Log in and arrive at the Home dashboard.
- 4. **4** Open the menu in the upper-left corner to visit Tasks, Friends, Rooms, Streaks, Profile, and Settings.
- 5. **5** Add one small task and complete it. Tiny wins count. ✨

New-user tour: after a successful login, Grove can display a short popup tour over the Home page. You can replay it later from Settings.

Navigation map

Home	Overview of your streak, friends, calendar area, upcoming activity, and tasks.
Profile	Your avatar, banner, name, bio, streak, and public profile information.
Friends	Search for users, send requests, accept or decline requests, and remove friends.
Tasks	Add, complete, reopen, and delete tasks.
Rooms	Browse study rooms or create one with a map, timer, music, chat, and invited friends.
Streaks	View points, daily streak, tree level, next growth milestone, and the next task to complete.
Settings	Open this manual or replay the Home tutorial.

Home Dashboard

The Home page is the app's front porch: it gives you a quick look at the areas that matter most without making you open every page.

Greeting	Changes with the time of day and uses your first name when your profile is available.
Streak area	Shows your current streak summary. Open Streaks for the detailed tree view.
Friends card	Gives an at-a-glance friend count or online summary when connected.
Calendar	Holds the calendar overview area. In the current source, this card may still display a placeholder until its data is connected.
Up Next	Holds the next-activity overview area. It may also display a placeholder while the feature is being connected.
Task list	Shows the Home-page task summary; use the full Tasks page to add and manage tasks.

The popup tour

When the tutorial is queued after login, Grove highlights one Home-page feature at a time. Use **Next** and **Back** to move through the steps, or close it and replay it later from Settings.

A calm first visit

Start with one action: open Tasks and add the single most important thing you want to finish today. You do not need to organize your whole life before using the app.

Tasks

The Tasks page is where plans become check marks. It uses the signed-in user's account ID when loading and changing task data.

Add a task

1. Open **Tasks** from the menu.
2. Type a short title in the "Add a task" field.
3. Press **Enter** or select the plus button.

Complete, reopen, or delete

- Select the square checkbox to mark a task complete.
- Select the checked box again to reopen it when needed.
- Use the remove button to delete a task you no longer need.

- If the API is unavailable, Grove may show an error explaining that the task could not be loaded or changed.

Good task: “Finish the Physics 89 reflection.”

Hard-to-use task: “Do school.”

Clear tasks are easier to start, easier to finish, and much more satisfying to check off. 👍

Friends

Friends helps you find other Grove users and manage your study circle.

Search

Enter a username and select Search. Results link to each user’s profile.

Send a request

Choose Add next to a search result. The button changes to Requested after a successful request.

Respond

Open the Requests tab, then accept with the check button or decline with the X button.

Remove a friend

Open the Friends tab and select Remove beside the person you want to disconnect from.

Pending requests may also appear as a badge beside **Friends** in the navigation menu.

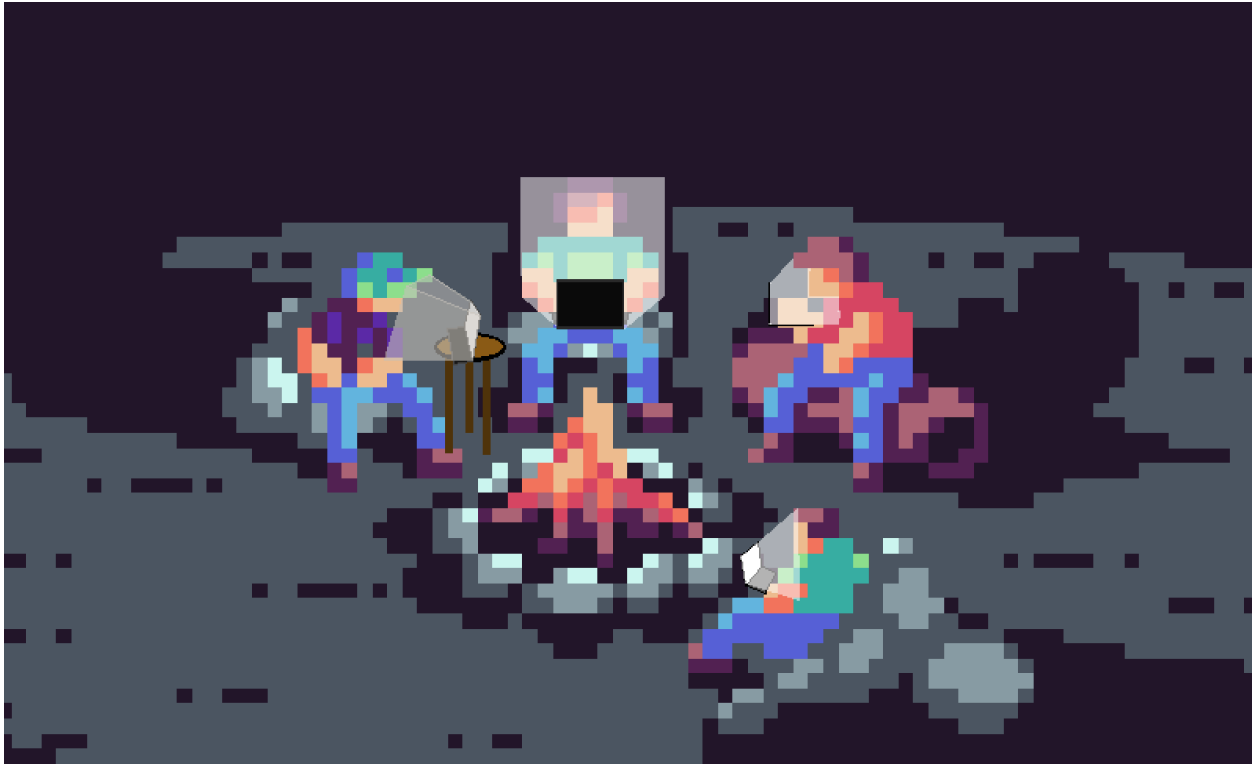

Study together without overplanning

Add the people you actually work with, then create a room for one concrete session: one course, one timer, one task.

Study Rooms

Study Rooms are shared spaces for focused work. The lobby shows available rooms and lets you create your own.

Join a room

Select a room card in the lobby. Each card shows the room name and the number of people studying. Grove stores enough room information to reopen the selected room view.

Create a room

The create-room form supports:

- A room name and visual setting or map.
- A focus timer length.
- Friend search and invitations.
- Music and chat toggles.

Inside a room, you can start or pause the focus timer, reset it, and toggle room music when enabled. Chat controls appear only when the room has chat enabled.

Placeholder rooms

The initial source includes sample rooms and sample friends so a fresh database still has something to display. These placeholders are intended to be replaced by real seeded data for production.

🔥 Streaks and Your Tree

Grove turns completed work into visible growth. The Streaks page combines your points, current streak, tree level, and the distance to your next level.

A new start

Growing steadily

A thriving tree

How growth works in the current app design

- Each completed task adds a point.
- Completing a task each day helps continue the streak.
- The progress card shows points remaining until the next tree level.
- The “Water your tree” card points you toward an unfinished task.

The tree page limits the displayed level to the available art levels and shows a fully grown state at the maximum level.

👤 Profile

Your profile is your Grove identity. Your own profile can include an avatar, banner, first and last name, display name, email, bio, and streak card.

Edit your own profile

Select the edit button, update your information, then save. You can also upload a new avatar or banner image from your own profile.

View another user

Username-based profile links open other users’ profiles. From another profile, Grove can show actions such as adding the person as a friend. Some communication actions may still be visual placeholders depending on backend support.

Keep it recognizable

A clear display name, a short bio, and a recognizable avatar make it easier for classmates to know they found the right person.

Settings and Help

Settings is the help hub. It should contain two main actions:

Open the app manual

Opens this PDF in a new browser tab, where you can scroll continuously, search the document, download it, or print it.

Replay the Home tutorial

Queues the guided popups and returns you to Home so you can review the dashboard features again.

Sign out

Use **Log Out** at the bottom of the navigation menu. Signing out returns the app to its authentication flow.

Troubleshooting

The tutorial does not appear

The tour is designed to start immediately after a successful login, not after every refresh. Use **Settings** → **Replay the Home tutorial** to run it again.

The PDF button opens nothing or shows 404

Confirm that the file is exactly here:

```
public/manual.pdf
```

Vite serves files from `public` at the site root, so the Settings link should point to `/manual.pdf` or use `import.meta.env.BASE_URL`.

Settings returns to Home

Check `App.jsx`. The Settings route must render the Settings page instead of redirecting:

```
<Route path="/settings" element={<Settings />} />
```

Invalid Refresh Token

An old Supabase session may remain in browser storage. Clear the site's stored data, reload, and log in again. This is separate from the tutorial and PDF features.

Tasks, rooms, friends, or streaks fail to load

Confirm that the backend is running and that `VITE_API_URL` points to the correct API. The frontend displays errors or fallbacks when those requests fail.

Before submitting or deploying

Test the app in a fresh browser session: sign in, open the tutorial, finish it, visit Settings, open the PDF, replay the tutorial, and confirm the browser back button behaves normally.

Quick Final Checklist

- ✓ I can log in and reach Home.
- ✓ The menu opens and every real page has a matching route.
- ✓ I can add, complete, reopen, and delete a task.
- ✓ I can search for users and manage friend requests.
- ✓ I can enter or create a study room.
- ✓ My streak page displays points and tree progress.
- ✓ Settings opens `/manual.pdf` in a new tab.
- ✓ Settings can replay the Home tutorial.

You are ready to grow.
